Breaking Down PMP Into Simple Steps:

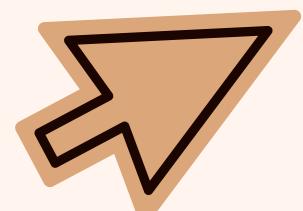

Mastering the Process

PROCESS GROUP FOR PROJECT MANAGEMENT

Five Process Groups:

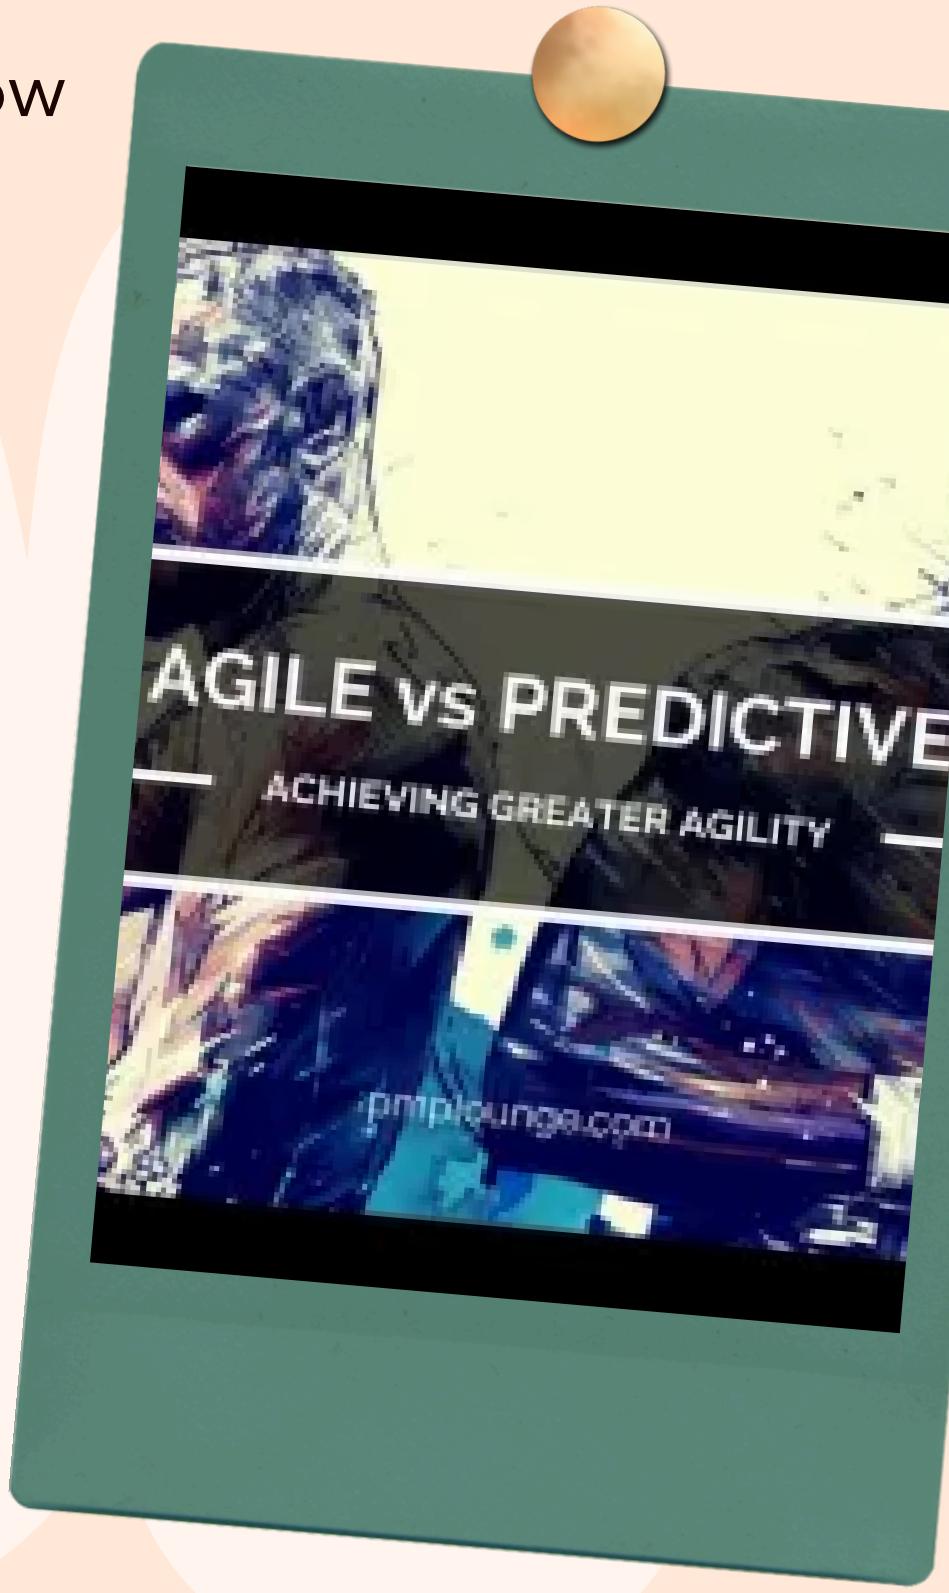

Initiation, Planning, Execution, Monitoring & Control, and Closing. Master the essential documents like the project charter, stakeholder register, and business case.

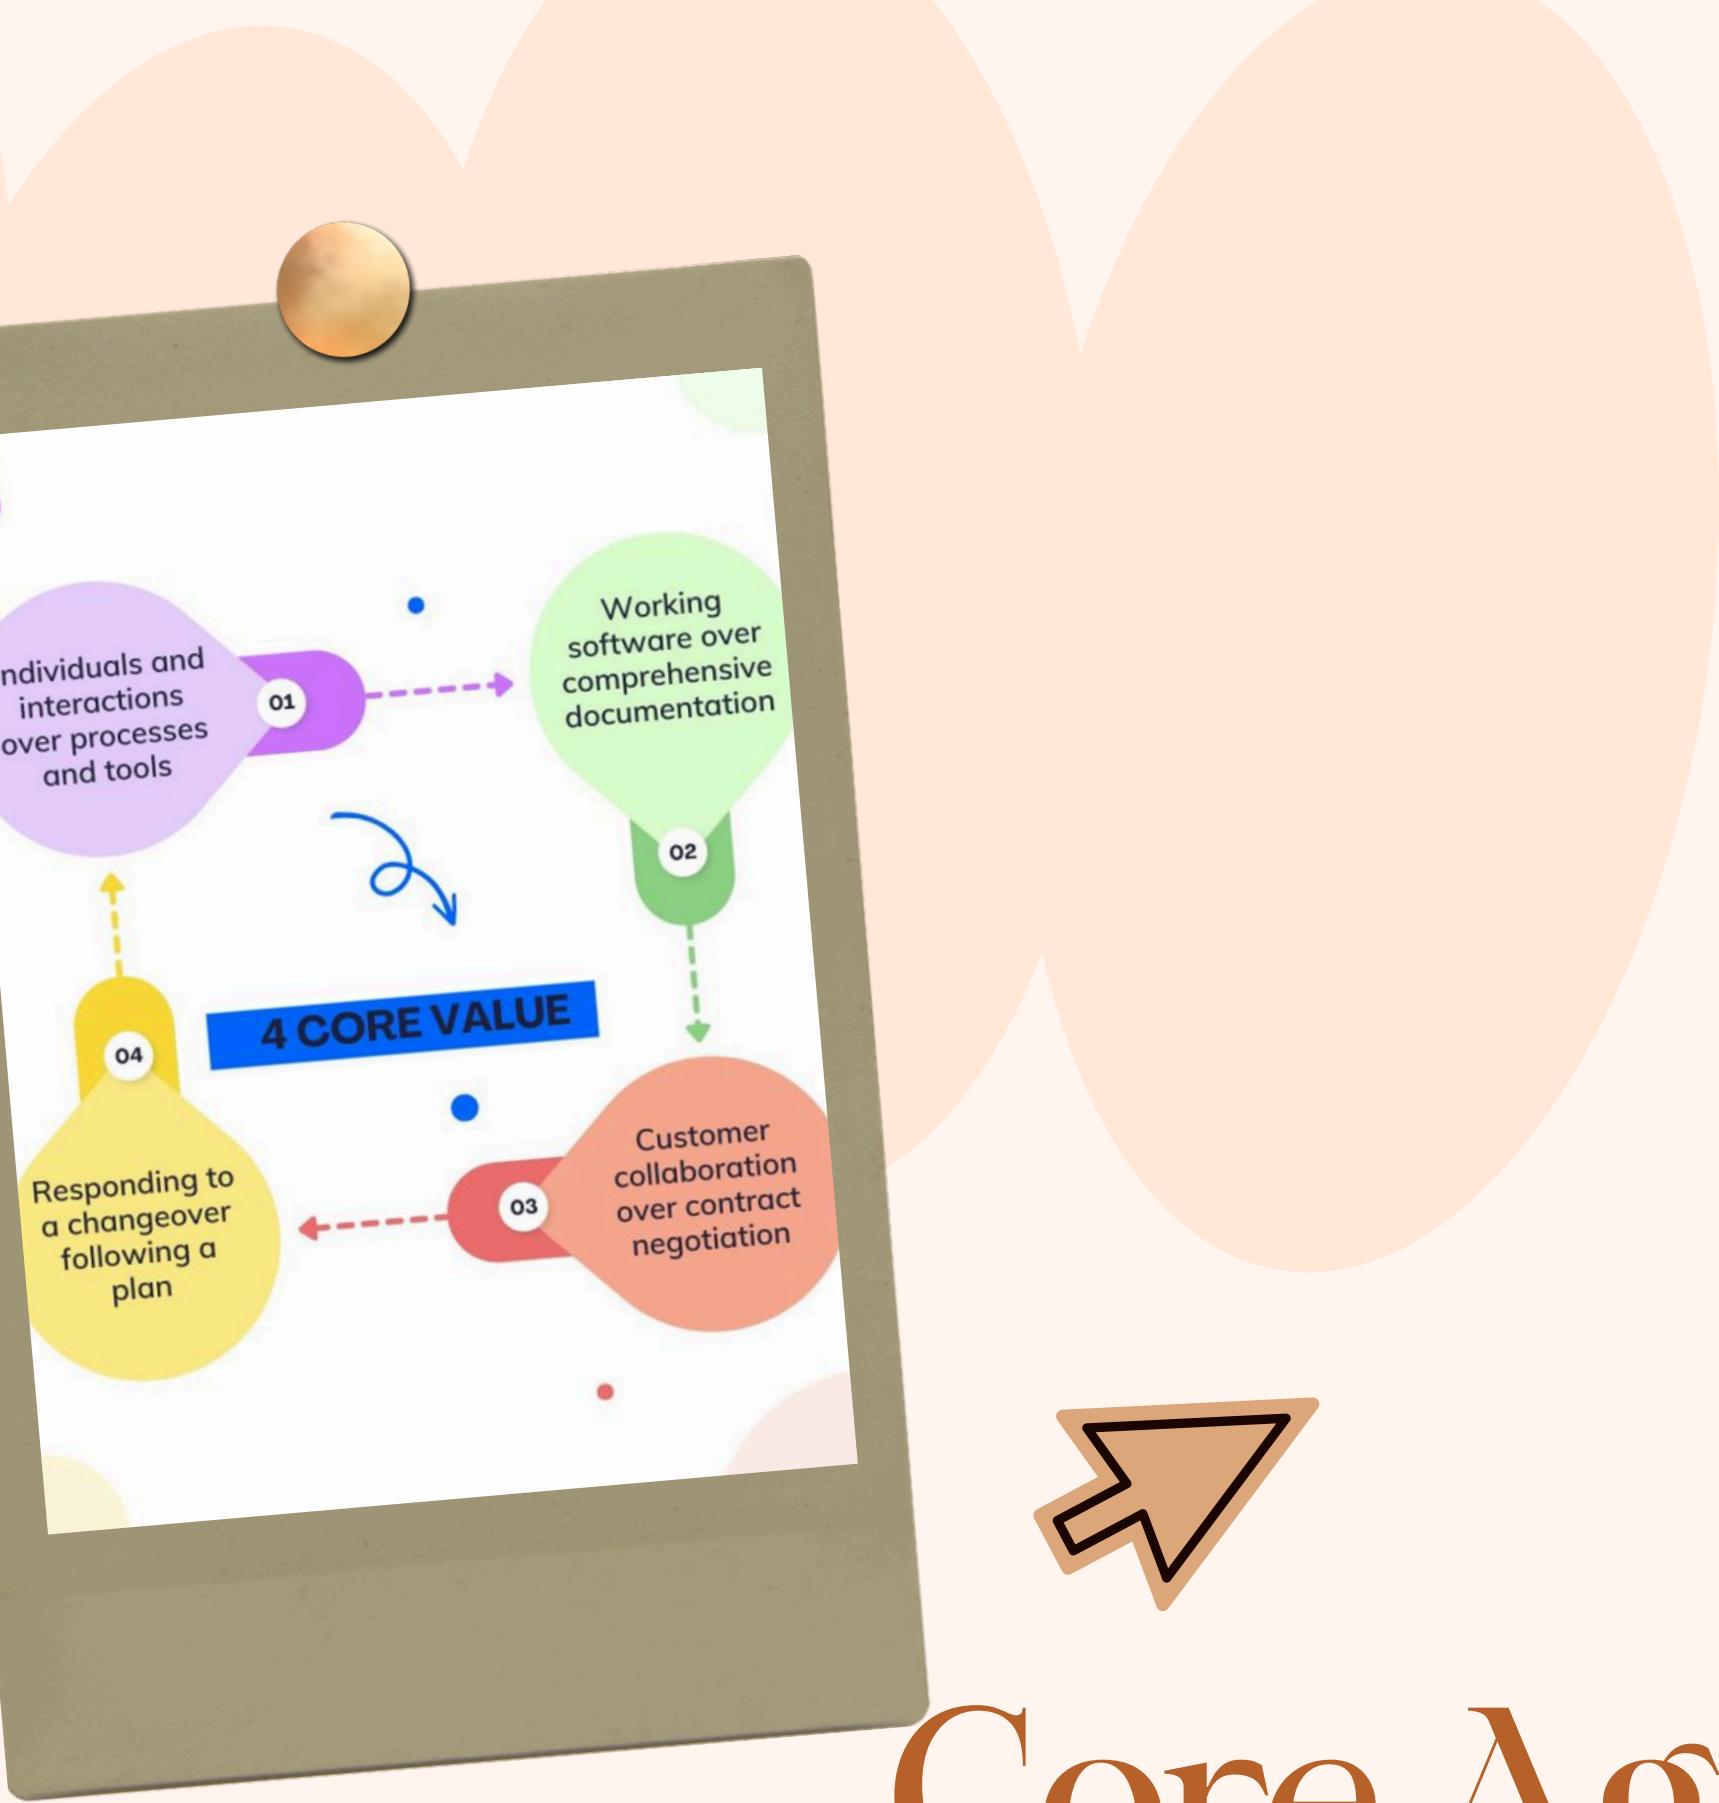

Agile vs. Predictive Lifecycle:

Understand when to use agile vs. predictive life cycles. Know how to identify the right approach based on your project's scope and delivery characteristics.

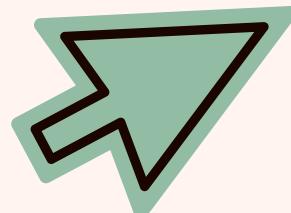

Core Agile Values:

Customer collaboration, responding to change, and delivering working software-these are your guiding pillars for agile projects.

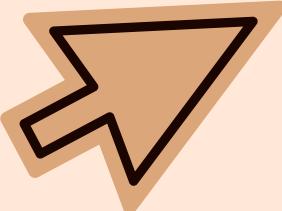

Key Plans & Documents:

18 essential plans and 33 documents form the backbone of PMP. Get familiar with the details of each to ace the Planning phase.

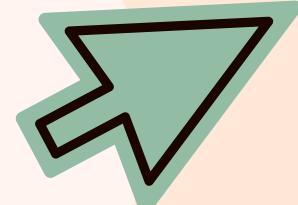

Execution Phase:

Deliverables are produced here-manage conflicts, engage stakeholders, and ensure the project stays on track

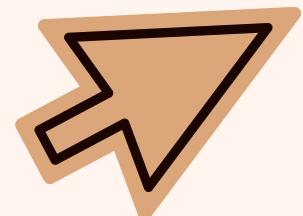

Monitoring & Control:

Track your project's progress through performance metrics, and adjust plans as necessary to stay aligned with the goals.

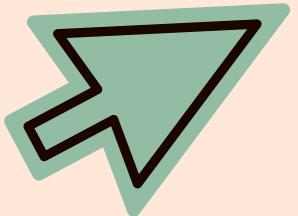

Closing the Project:

Finalize deliverables, obtain sponsor approval, and document lessons learned to close the project successfully.

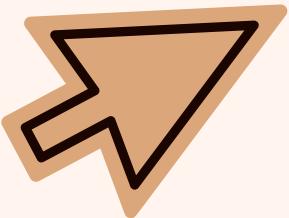

Mastering Exam Questions:

Learn to break down complex questions using a seven-step approach—slow down, identify keywords, and use elimination techniques to boost your accuracy.

Time Management for PMP Exam:

practice with a simulator to master time management. Know when to speed up and when to slow down.
